Q1. Food Delivery Billing System (Multiple Inheritance using Two Interfaces)

Score: 0.00 TC: 0/3 passed

CODE

```
import java.util.Scanner;
public class Main{

    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        double foodCost=sc.nextDouble();
        sc.nextLine();
        String CouponCode=sc.nextLine();
        FoodOrder obj=new FoodOrder();
        double deliveryCharge=obj.calculateDeliveryCharge(foodCost);
        double discount=obj.calculateDiscount(foodCost,CouponCode);
        double finalBill=foodCost+deliveryCharge-discount;
        System.out.println("Food Cost : " + foodCost);
        System.out.println("Delivery Charge : "+ deliveryCharge);
        System.out.println("Discount : " + discount);
        System.out.println("Final Bill : " + finalBill);
    }
}
interface DeliveryCharge{
    double calculateDeliveryCharge(double foodCost);
}
interface CouponDisocunt{
    double calculateDiscount(double foodCost, String CouponCode);
}
class FoodOrder implements DeliveryCharge,CouponDiscount{
    public double calculateDeliveryCharge(double foodCost){
        if(foodCost>=500)
            return 0;
        else
            return 50;
    }
    public double calculateDisocunt(double foodCost, String CouponCode){
        if(CouponCode.equals("SAVE10"))
            return foodCost * 0.10;
        else
            return 0;
    }
}
```

Q2. Hotel Billing System (Multiple Inheritance using One Class and One Interface)

Score: 10.00 TC: 3/3 passed

CODE

```
import java.util.Scanner;
public class Main{
    public static void main(String[] args){
        Scanner sc = new Scanner(System.in);
        int roomNumber = sc.nextInt();
        sc.nextLine();
        String guestName = sc.nextLine();
        double roomRent = sc.nextDouble();
        HotelBill obj = new HotelBill(roomNumber,guestName,roomRent);

        double serviceCharge = obj.calculateServiceCharge();
        double finalBill = roomRent + serviceCharge;
        System.out.println("Room Number : " + roomNumber);
        System.out.println("Guest Name : " + guestName);
        System.out.println("Room Rent : " + roomRent);
        System.out.println("Service Charge : " + serviceCharge);
        System.out.println("Final Bill : " + finalBill);
    }
}

class Room{
    int roomNumber;
    String guestName;
    double roomRent;
    Room(int roomNumber,String guestName,double roomRent){
        this.roomNumber=roomNumber;
        this.guestName=guestName;
        this.roomRent=roomRent;
    }
}

interface ServiceCharge{
    double calculateServiceCharge();
}

class HotelBill extends Room implements ServiceCharge{
    HotelBill(int roomNumber,String guestName,double roomRent){
        super(roomNumber,guestName,roomRent);
    }
    public double calculateServiceCharge(){
        if(roomRent>=5000)
            return roomRent*0.12;
        else
            return roomRent*0.08;
    }
}
```

INPUT

205
Ananya
6000

OUTPUT

Room Number : 205
Guest Name : Ananya
Room Rent : 6000.0
Service Charge : 720.0
Final Bill : 6720.0
